Art Unit: 2644

DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-27, 66-83, 121, and 123, drawn to a sub-harmonic generator with square wave signal divider, wave-shaping circuit, and RMS detector, drawn to produce output 120 in Figure 1 classified in class 381, subclass 61.
- II. Claims 38-45, 95-100, 122, and 124, drawn to a sub-harmonic signal circuit to receive, produce, and filter a ranges of signals, with an amplifier and summation circuit drawn to produce output 150 in Figure 1, classified in class 381, subclass 61.
- III. Claims 55-63 and 111-120, drawn to expansion circuit, classified in class 381, subclass 98.
- IV. Claims 28-37, 84-94, 46-54, 101-110, drawn to stereophonic expansion circuits with sub-harmonic generator, classified in class 381, subclass 1.

The inventions are distinct, each from the other because of the following reasons:

Inventions (I or II) and (III or IV) are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions I and II relate to sub-harmonic generation while inventions III and IV relates to an expansion circuit and have different

classification in the art. In addition, the individual searches for Groups I and II would require different consideration throughout prosecution of the application, thereby requiring restriction.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Inventions IV and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because a stereo expansion circuit does not require a sub-harmonic generator. The subcombination has separate utility such as generating increasing apparent stereo width of an audio signal.

This application contains claims directed to the following patentably distinct species of claimed invention IV: Species A) Claims 28-37 and 84-94; Species B) Claims 46-54 and 101-110.

If Invention IV is elected, applicant is required under 35 U.S.C. 121 to elect a single disclosed species (A or B) for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Justin Michalski whose telephone number is (703)305-5598. The examiner can normally be reached on 8 Hours, 5 day/week.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bill Isen can be reached on (703)305-4386. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
